

System Information for Universities

Donation of Orthodontic Practice Management Software

Ortho2 is committed to the education of orthodontic residents and is pleased to donate software to any university orthodontic department choosing to provide their students with a computerized practice management experience. The opportunity to use our computer system while in school helps residents gain insight into their practice management options before they become responsible for their own practices.

Our Windows-based software, ViewPoint, practice-proven since its release in 1998, is in use by hundreds of orthodontic practices across the country. ViewPoint has made its mark as perhaps the most feature-rich, user-friendly, and time-tested orthodontic practice management system on the market today.

In addition, our cloud-based system, Edge, is a comprehensive practice management software designed with you in mind. Edge's customizable interface allows end users to quickly access the features they want with a simple click. And because Edge uses the cloud, you won't have to worry about servers or backups.

Ortho2 Systems

We believe strongly in the benefit Ortho2 systems can provide your orthodontic program. To provide either of our systems at their best, we require a commitment from your department. First, we recommend that you take advantage of our on-site training program. Our training specialists have worked extensively with orthodontic departments and understand there can be differences from a private orthodontic practice, especially in regard to scheduling. Through this service we customize the software for your department. We can also provide data conversion from an existing management program.

Second, and most important, is ongoing support. Our donation of software requires that your department commit to an investment in *either* on-site training *or* prepayment of the first year of support. A custom proposal will detail your investment toward this offer. Annual renewal of the *Edge System Support Agreement* or *ViewPoint System Support Agreement* includes annual enhancements, unlimited toll-free support, remote support via Internet, and monthly webinars to ensure that you get the most from your system. Annual Ortho2 Users Group Meetings are also offered with reduced rates.

To allow Edge or ViewPoint to be used throughout an orthodontic department's network, the annual support fee for universities is fixed at \$2,000 regardless of how many workstations will access it. *Better yet, this annual fee will be waived* each year that the department purchases refresher training and makes the residents available for an Edge or ViewPoint demonstration. During the training, we will review how Ortho2 systems are being used in the clinic to assure that the department is maximizing its benefit from existing and new features. During the resident session, which normally takes 90 minutes, including a provided lunch, we demonstrate to residents how Ortho2 systems are typically used in private practice for their post-graduation educational benefit.

Edge and ViewPoint do have requirements that extend beyond the proprietary software that we donate. They require a network of Windows workstations and ViewPoint also requires Microsoft SQL Server. Your Ortho2 system also requires, or benefits from, Microsoft Word and Outlook, virus protection software, backup software, etc. All of these, and the associated installation, configuration, and support are available from Ortho2 in order to assure optimal system performance. A detailed description is available in your system's Setup Handbook.

*Many universities have integrated Ortho2 systems successfully into their clinics.
Please call us for a list of universities currently using Edge and ViewPoint.*
